# NEW OZONE THERAPY

At Centric Dental Views we make sure you receive world class dental treatment, because, for us, it is so important that all our patients are treated as comfortably and gently as possible in the safest environment possible.

And now you will experience the huge benefits of Ozone Therapy - the very latest thing in dental technology.

## What is Ozone Therapy?

Ozone Therapy is a rinsing, washing, sterilisation and direct application process that uses Ozone, arguably, earth's most powerful naturally occurring cleansing agent.

There is no pain associated with Ozone Therapy. It is free of chemicals, it's natural and organic and non-invasive.

Yet it is such a powerful purifying process, disinfecting as it cleans. This makes it just the thing for eliminating bacteria and fungus, fighting infection and overcoming mouth odour and bad taste\*.

## What is Ozone Therapy used for?

So effective is Ozone Therapy that it is perfect for preserving teeth, overcoming tooth problems with hot and cold foods, cleaning out and remineralising small cavities, whitening teeth and healing mouth and gum problems such as ulcers.

What this means for you is that, by the use of ozone enriched water and ozone gas there is less use of the drill for small cavities and almost no risk of bacteria forming in cavities.

It is particularly effective for direct caries treatment, decay reduction and root canal treatment.

In fact, it's so good that Centric Dental Views now uses Ozone enriched water for all rinsing, washing and sterilising procedures carried out in the practice.

\* Studies show that Ozone Therapy gets rid of the bacteria which causes tooth decay after only 10 seconds, eliminating up to 99% of viral and bacterial contamination. Bacteria, viruses and fungus such as staphylococcus aureus, salmonella, E-Colli and MRSA can effectively be eradicated using Ozone Therapy.
